

SQL Constraints

- PRIMARY KEY
- FOREIGN KEY
- DEFAULT
- CHECK

Types of Data Integrity

PRIMARY KEY Constraints

SQL

- Is used to uniquely identify a row in a table
- Must be **unique and not NULL**
- May involve multiple columns

```
CREATE TABLE Sales.Opportunity
(
    OpportunityID int NOT NULL
        CONSTRAINT PK_Opportunity
        PRIMARY KEY,
    Requirements nvarchar(50) NOT NULL,
    ReceivedDate date NOT NULL,
    LikelyClosingDate date NULL,
    SalespersonID int NULL,
    Rating int NOT NULL
);
```

How to Create Composite Primary Key

```
CREATE TABLE dbo.OrderItems
(
  OrderID int NOT NULL
    REFERENCES dbo.Orders(OrderID),
  ProductID int NOT NULL
    REFERENCES dbo.Products(ProductID),
  UnitPrice money NOT NULL,
  Quantity int NOT NULL
  CONSTRAINT PK_OrderItem PRIMARY KEY CLUSTERED
    (OrderID, ProductID)
);
```

FOREIGN KEY Constraints

SQL

- Is used to enforce relationships between tables
- Must reference PRIMARY KEY or UNIQUE column(s)
- May be NULL
- Can be applied WITH NOCHECK

```
CREATE TABLE Sales.Opportunity
(
    OpportunityID int NOT NULL
        CONSTRAINT PK_Opportunity
        PRIMARY KEY,
    Requirements nvarchar(50) NOT NULL,
    ReceivedDate date NOT NULL,
    LikelyClosingDate date NULL,
    SalespersonID int NULL
        CONSTRAINT FK_Opportunity_Salesperson
        FOREIGN KEY
        REFERENCES Sales.Salesperson (BusinessEntityID),
    Rating int NOT NULL
);
```

DEFAULT Constraints

SQL

- Provide default values for columns
- Are used when no value is provided in an INSERT statement
- Must be compatible with the data type for the column

```
CREATE TABLE Sales.Opportunity
(
    OpportunityID int,
    Requirements nvarchar(50),
    ReceivedDate date
    CONSTRAINT DF_Opportunity_ReceivedDate
    DEFAULT (SYSDATETIME()),
    LikelyClosingDate date,
    SalespersonID int
    Rating int
);
```

CHECK Constraints

SQL

- Limits the values that are accepted into a column
- Values that evaluate to FALSE are rejected
- Care must be taken with values returning NULL
- Can be defined at table level to refer to multiple columns

```
CREATE TABLE Sales.Opportunity
(
    OpportunityID int,
    Requirements nvarchar(50),
    ReceivedDate date,
    LikelyClosingDate date,
    SalespersonID int,
    Rating int
    CONSTRAINT CHK_Opportunity_Rating_Range1To4
    CHECK (Rating BETWEEN 1 AND 4)
);
```
